

ROLL-A-RAMP® HANDRAILS

Straight end

Straight-end handrails are more economical and provide additional security to any ramp.

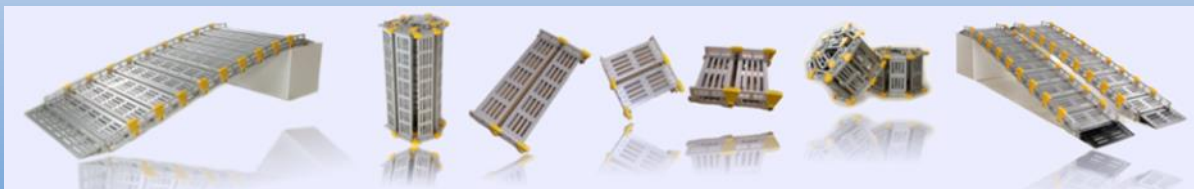

- ◆ Available for one or both sides
- ◆ May be purchased with ramp or added any time in the future
- ◆ Inserted and removed quickly—keeps your ramp portable
- ◆ Adds a layer of security—for one side or both sides
- ◆ Lightweight—Aluminum
- ◆ Available for any ramp length
- ◆ Rail sections or continuous span

- ◆ Steel bracket provides a solid and durable connection for handrail to ramp
- ◆ Easily installed using one bolt and one nut.
- ◆ Brackets may remain on ramp for ease of rail insertion or be removed.

Loop ends

Loop-end rails extend farther on the ramp and provide full end-to-end coverage for added security. (12" / 30cm loops).

Handrail Sections or Continuous Handrail

Sections: Standard on all ramps over 10' (3m)

- ◆ Multiple shorter rail sections along the ramp, provide easier portability, setup, and removal of the system.
- ◆ Handrail sections are quickly removed as one piece without disassembling tube connectors.

Continuous Handrail (by request)

- ◆ Continuous handrails span the full length of ramp from top to bottom as one continuous length.
- ◆ Best for stationary or permanent installations.
